

# Notepad++

The COMPSCI 111 Text Editor for XHTML

The text editor that we will be using in the Computer Science labs for creating our web pages is called Notepad++ and is freely available for the Windows operating system. If you plan to do work outside of the labs, perhaps at home, you may like to use the same software that we have available in the labs. This document describes how to install and configure Notepad++ using the same settings available in the labs. be using in the labs to write our Java source code.

## Installing Notepad++

You can download Notepad++ from the sourceforge website. Start by browsing to the main NotePad++ website:

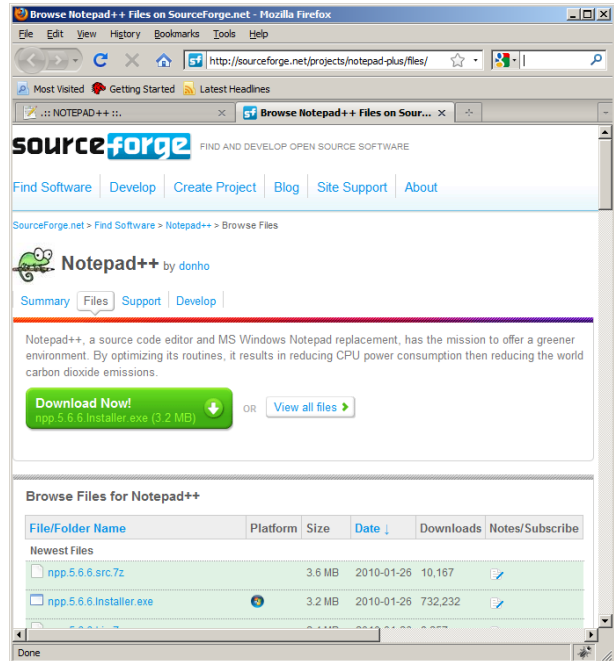

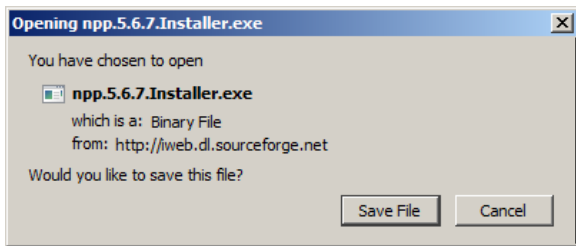

<http://notepad-plus.sourceforge.net>

From here, you can select the *Download* menu, and then select the *Binary files* menu, as shown in the screen shot below:

Select the *Download Notepad++ executable files* option, which will redirect you to the sourceforge website.

From the sourceforge download page – click the “Download Now” button and save the .exe file to your local machine:

Double-click the installer .exe file and simply follow the prompts, accepting the default options from the “Choose Components” window.

To check that you have installed Notepad++ correctly, run the application and you should see an editor window like the following appear:
