

Databases 2 – Retrieving information

Lecture 22 – COMPSCI111/111G SS 2018

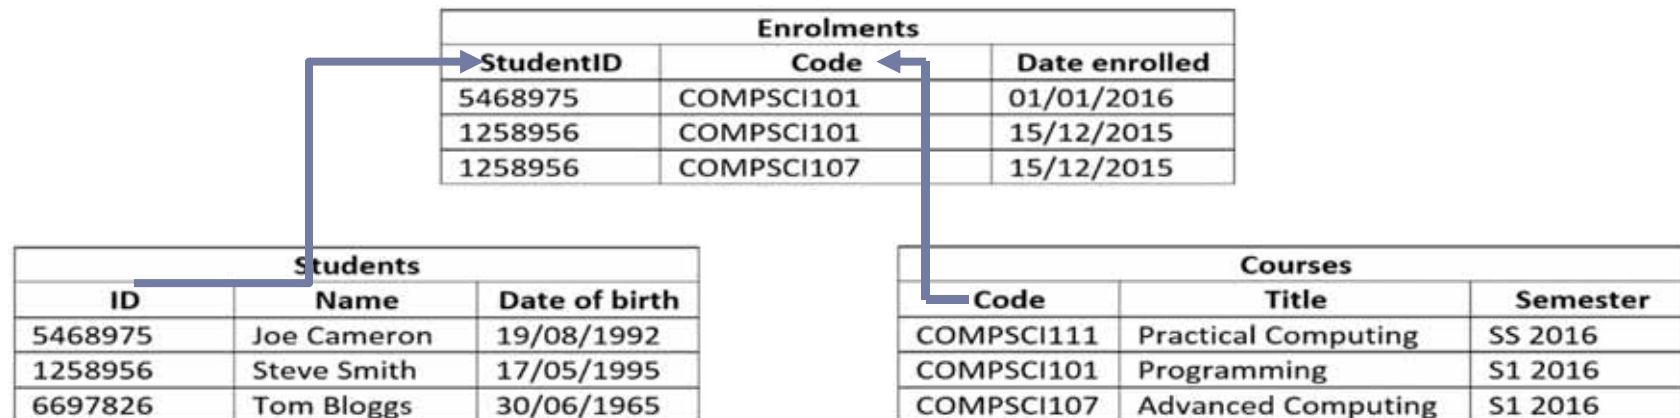

Today's lecture

- ▶ Recap of yesterday's lecture
- ▶ Using Queries to retrieve information from database
- ▶ Using Reports to retrieve information from a database

Recap

- ▶ Databases can use the relational model, where relationships exist between entities
- ▶ Relationships require tables, primary key and foreign key
- ▶ Referential integrity helps to maintain consistency in our database
- ▶ Looked at how to create tables, insert fields and data and create a relationship

Aspects of a database

- ▶ Before we can create our database, we need to decide how to:
 1. **Organize** data in our database
 - ▶ Models, tables, relationships
 2. **Enter** data in our database
 - ▶ Datasheet view
 3. **Retrieve** data from our database
 4. **Present** the retrieved data to the user

1. Retrieving data

- ▶ **Queries** allow you to retrieve certain records from your database
- ▶ Two kinds of queries in Access:
 - ▶ Query by example (QBE):
 - ▶ Visual way of designing queries
 - ▶ Access converts your QBE queries into SQL
 - ▶ SQL (Structured Query Language):
 - ▶ Uses commands to retrieve data from databases
- ▶ Access creates a table containing the results (if any) of the query

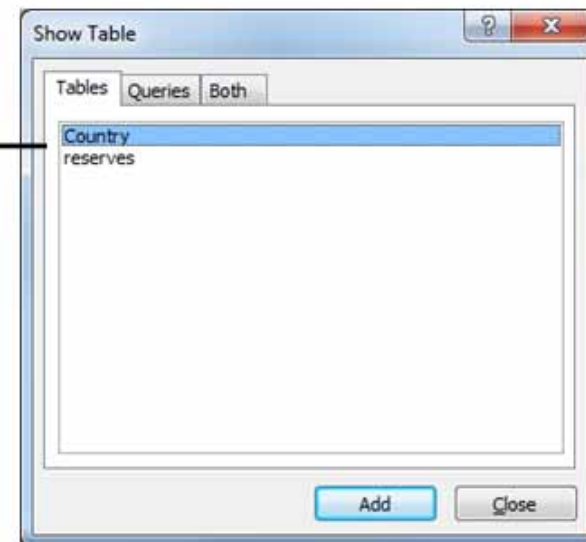

QBE queries

1. Select Query Design from the Create Menu

2. Select tables to use in query

QBE queries

The screenshot shows a database interface with two tables: 'Country' and 'reserves'. The 'Country' table has fields: Country (primary key), Land Area, Water Area, Coastline, and Forest Percent. The 'reserves' table has fields: ID (primary key), Reserve, Country, Size_Km2, Size_Acres, and Year_Designate. A 1-to-many relationship is shown between the 'Country' table and the 'reserves' table. Below the tables is a QBE grid with the following data:

Field:	Country	Reserve	Land Area	Size_Km2
Table:	Country	reserves	Country	reserves
Sort:				
Show:	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Criteria:				> 20000
or				

QBE grid

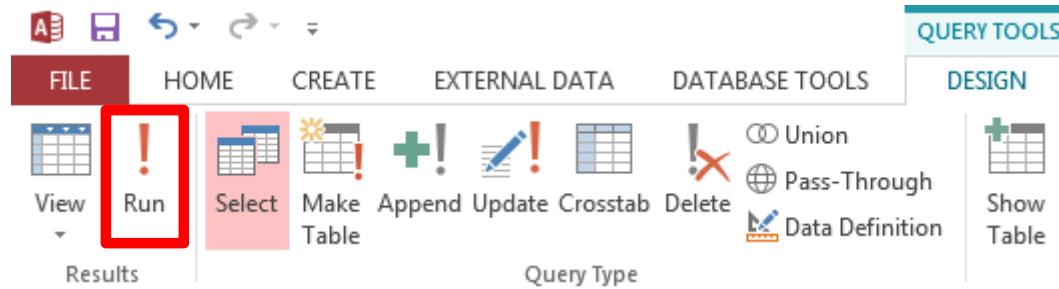

Choosing fields

Adding criteria to the field

QBE queries

**'Run'
button**

**Query
results**

The screenshot shows a window titled 'Query1' displaying the results of a query. The data is presented in a table with the following columns: Country, Reserve, Land Area, and Size_Km2. The table contains 7 rows of data.

Country	Reserve	Land Area	Size_Km2
United States	Arctic National Wildlife Refuge, AK	9,158,960	78049.05
United States	Denali Biosphere Reserve, AK	9,158,960	24412.95
United States	Noatak Biosphere Reserve, AK	9,158,960	33427.76
United States	Noatak National Preserve, AK	9,158,960	26143.26
Australia	Unnamed Conservation Park of South Australia	7,617,930	21326
United States	Wrangell-St. Elias National Park and Preserve, A	9,158,960	33685.22

Record: 7 of 7

QBE queries - sorting

- ▶ Results from QBE queries can be sorted in ascending and descending order

The screenshot shows the QBE editor interface. At the top, a box labeled 'Country' contains a list of fields: Country, Land Area, Water Area, Coastline, and Forest Percent. The 'Land Area' field is highlighted in red. Below this, a table defines the query structure:

Field:	Country	Land Area
Table:	Country	Country
Sort:	Ascending	
Show:	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Criteria:		
or:		

The screenshot shows the 'Query1' window displaying the results of the query. The table is sorted by Land Area in ascending order. The data is as follows:

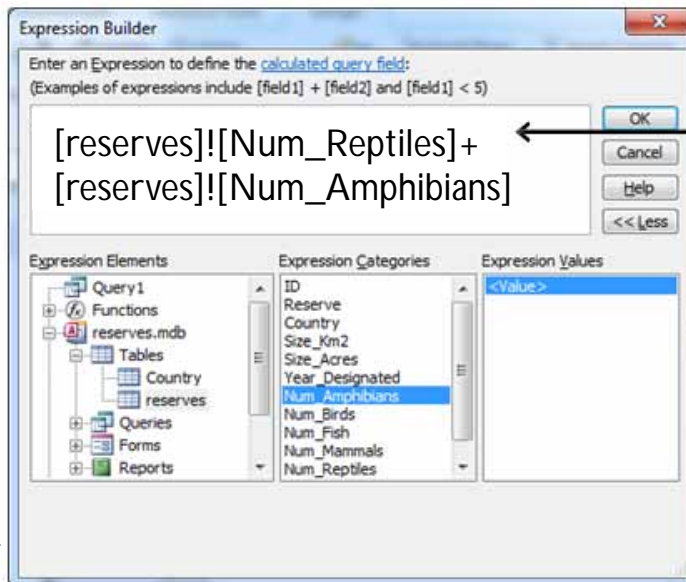

Country	Land Area
Australia	7,617,930
China	9,326,410
Japan	374,744
New Zealand	268,670
Panama	75,990
Singapore	638
Thailand	511,770
United States	9,158,960
*	

Record: 9 of 9

QBE queries - expressions

- ▶ Fields can be combined together to create an **expression** with the Expression Builder

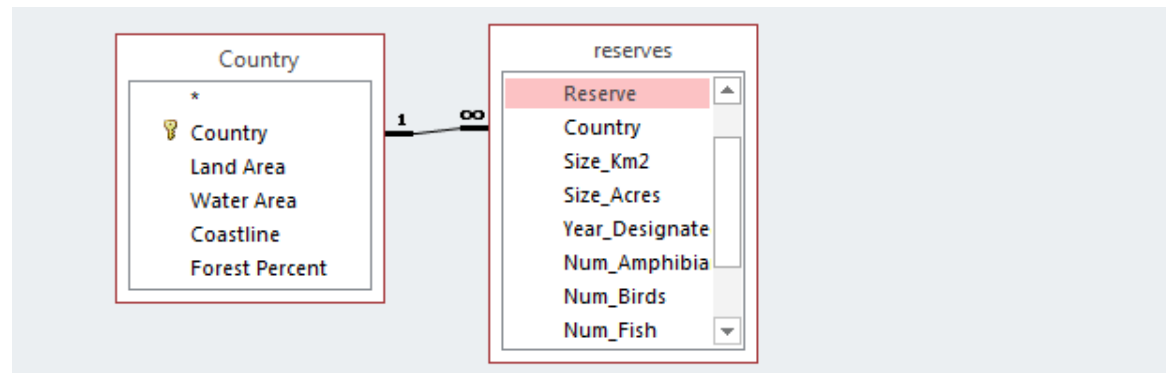

We can use the Access Expression Builder to create derived fields that are calculated when queries are made.

Results

Reserve	Country	Expr1
Azumayama Forest	Japan	22
Mount Hakusan	Japan	19

QBE queries - expressions

Field:	Country	Reserve	Animals: [reserves].[Num_Reptiles]+[reserves].[Num_Amphibians]
Table:	Country	reserves	
Sort:			
Show:	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
Criteria:			

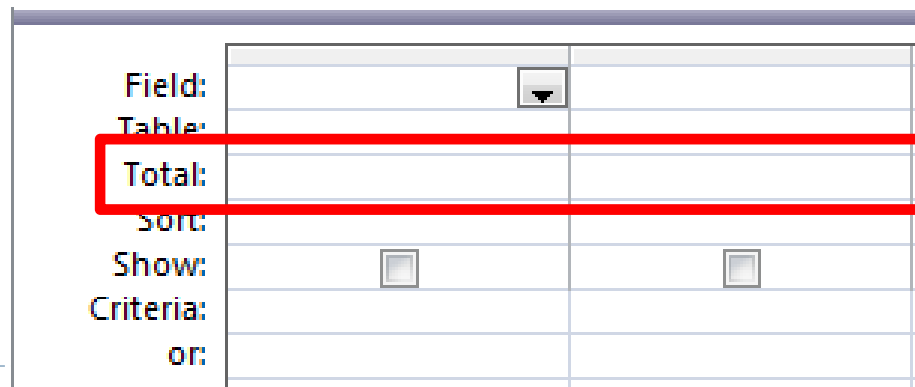

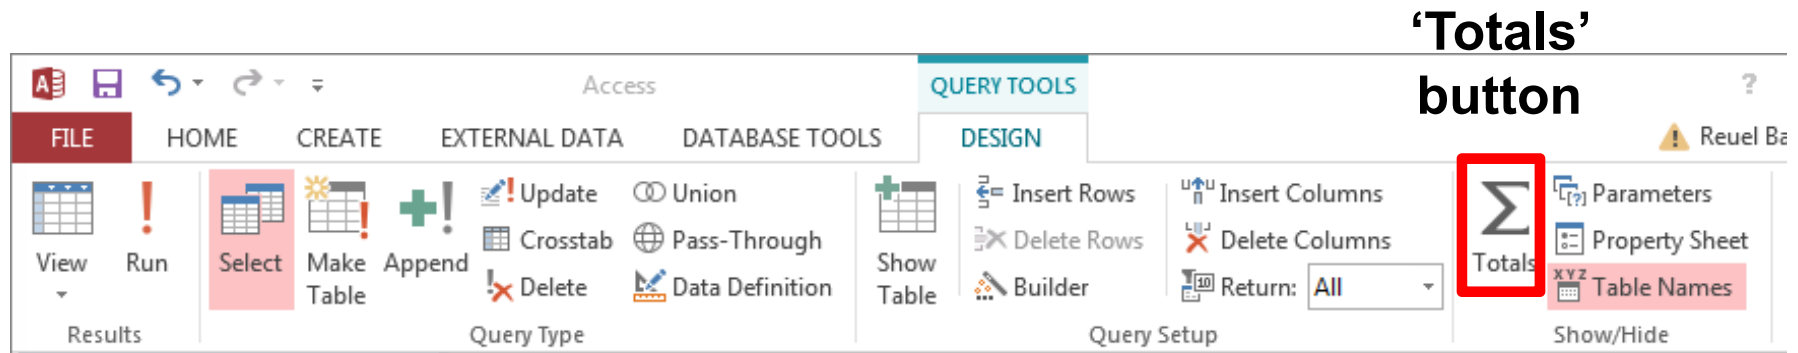

Country	Reserve	Animals
Australia	Booderee National Park	0
Australia	Bookmark Biosphere Reserve	56
Australia	Christmas Island National Park	11
Australia	Coorong National Park	30
Australia	Croajingolong	4
Australia	Currawinya Lakes National Park	0

Record: 1 of 483

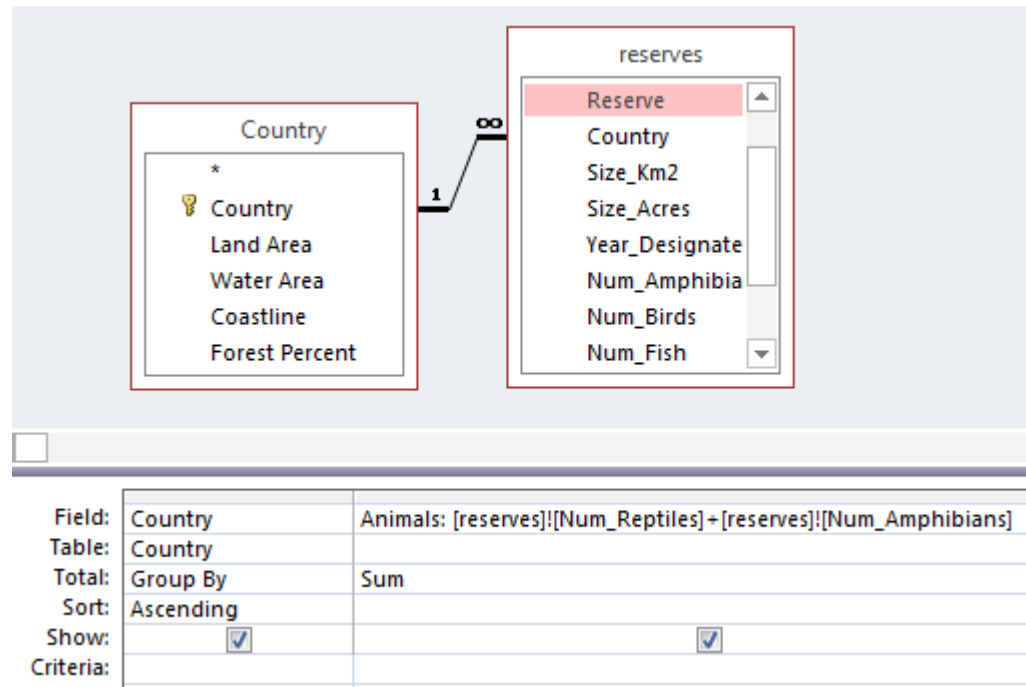

QBE queries

- ▶ A **Totals QBE query** allows us to group data using functions such as Min, Max, Avg, Sum etc.

QBE queries

Country	Animals
Australia	913
China	353
Japan	91
New Zealand	3
Panama	305
Singapore	36
Thailand	62
United States	5621

Record: 1 of 8

QBE Exercise

- ▶ Complete this QBE grid so that it will return the first name, surname and grade (in that order) of all students who have received an A+. Sort the results by surname in alphabetical order

The screenshot shows a QBE interface. At the top, a window titled 'Students' contains a list of fields: ID (with a key icon), Surname, First Names, Total, and Grade. Below this is a query grid with three columns and five rows. The first row is for 'Field:', the second for 'Table:', the third for 'Sort:', the fourth for 'Show:', and the fifth for 'Criteria:'. The 'Field:' row has a dropdown arrow in the first column. The 'Show:' row has checkboxes in all three columns. The 'Criteria:' row is empty.

Field:			
Table:			
Sort:			
Show:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Criteria:			
or:			

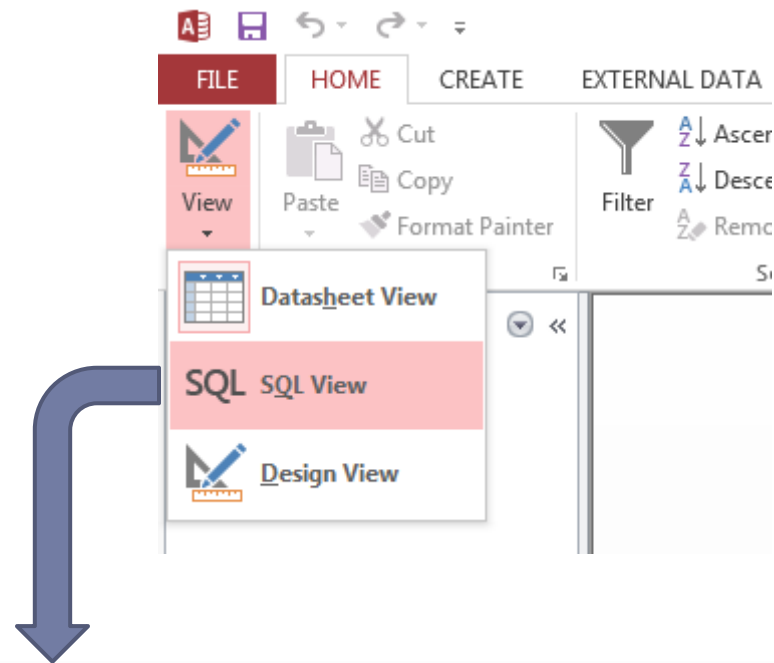

2. SQL introduction

- ▶ **Structured Query Language (SQL)** was developed by IBM in the 1970s and is commonly used today
- ▶ It uses text commands to perform operations on databases, such as inserting and removing records and running queries

QBE queries

```
Query1
SELECT Country.Country, reserves.Reserve, Country.[Land Area], Country.[Water Area]
FROM Country INNER JOIN reserves ON Country.Country = reserves.Country
WHERE (((Country.Country)="New Zealand") AND ((Country.[Land Area])>100000));
```

SQL queries

- ▶ Four clauses that can be used in a simple SQL query:
 - ▶ SELECT
 - ▶ FROM
 - ▶ WHERE
 - ▶ ORDER BY
- ▶ **Example:** construct a SQL query that will return the first names, surname, and grade (in that order) of all students who have received an A+. Sort the results by surname in alphabetical order

SQL queries - SELECT

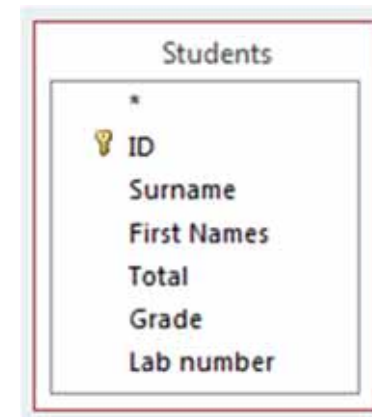

- ▶ Selects fields from the tables that we want to display in our results table

- ▶ Syntax:

```
SELECT [comma separated list of fields]
```

```
SELECT [First Names], Surname, Grade
```

- ▶ Note the square brackets around 'First Names' needed because of the space in the field name

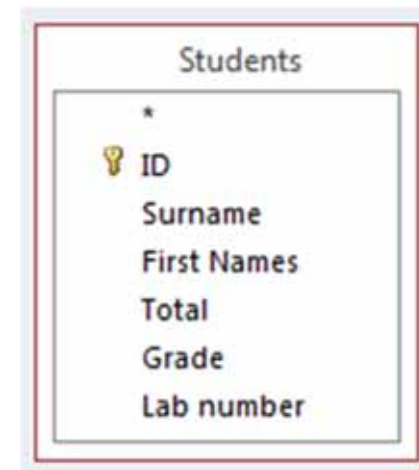

SQL queries - FROM

- ▶ Specifies the table which holds the field(s) listed in the SELECT clause
- ▶ Syntax

```
FROM [comma separated list of tables]
SELECT [First Names], Surname, Grade
FROM Students;
```

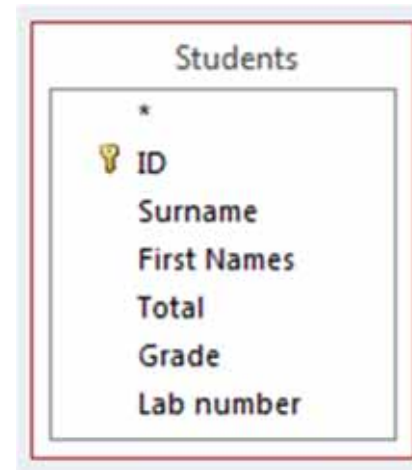

SQL queries - WHERE

- ▶ Used to provide criteria that limit the records displayed in the results table
- ▶ Syntax
`WHERE [criteria], [criteria], ...`
- ▶ There are a range of criteria we can use:
 - ▶ Comparisons (`=`, `>`, `<`, `<=`, `>=`, `<>`)
 - ▶ e.g., `WHERE [Land Area] < 50000`
 - ▶ `BETWEEN ... AND ...`
 - ▶ e.g., `WHERE Price BETWEEN 10 AND 20`
 - ▶ `LIKE` (some pattern)
 - ▶ e.g., `WHERE [City] LIKE 'San *'`
 - ▶ `AND`, `NOT`, `OR` (combined with any of above)
 - ▶ e.g., `WHERE Country = 'New Zealand' AND City = 'Auckland'`
 - ▶ `IS NULL`, `IS NOT NULL`
 - ▶ e.g., `WHERE [Postal Code] IS NOT NULL`

SQL queries - WHERE

```
SELECT [First Names], Surname, Grade  
FROM Students  
WHERE Grade = "A+" ;
```

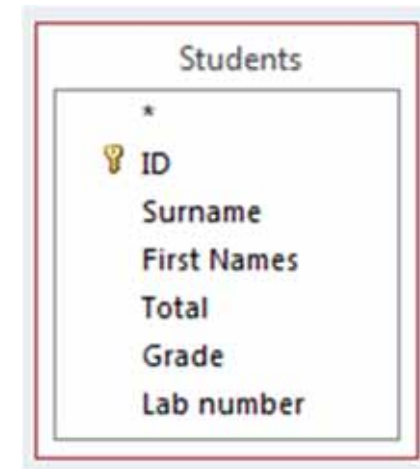

SQL queries – ORDER BY

- ▶ Allows us to sort our data in ascending or descending order

- ▶ Syntax:

ORDER BY [name of field] [ASC/DESC]

```
SELECT [First Names], Surname, Grade
FROM Students
WHERE Grade = "A+"
ORDER BY Surname ASC;
```

SQL queries

- ▶ You need to ensure that you put a semi-colon on the last clause of your SQL query:

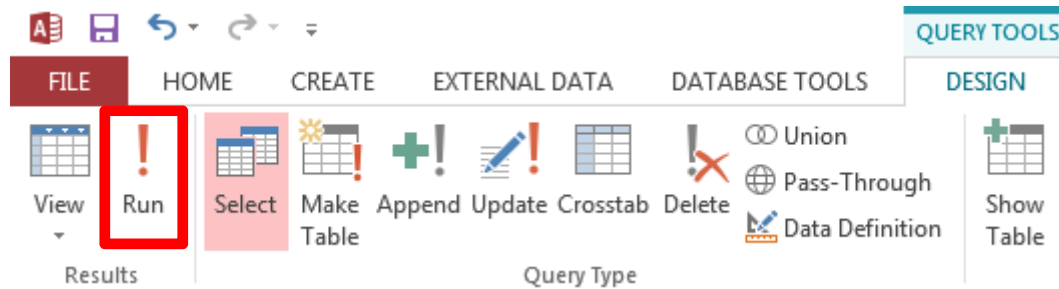

```
SELECT [First Names], Surname, Grade  
FROM Students  
WHERE Grade = "A+ "  
ORDER BY Surname ASC ;
```

SQL queries

- ▶ We run a SQL query in the same way that we run a QBE query

**'Run'
button**

The screenshot shows a Microsoft Access query window titled 'Query1'. The query is displayed in a table view with three columns: 'First Names', 'Surname', and 'Grade'. The first row contains the data 'Tom', 'Bloggs', and 'A+'. The status bar at the bottom indicates 'Record: 1 of 1' and 'No Filter'.

First Names	Surname	Grade
Tom	Bloggs	A+

SQL exercise

- ▶ Which of the following SQL commands will display of students?

ID	Surname	First Name	Total Mark	Grade	Lab number
1	Smith	Dick	98	A+	1
2	Bloggs	Tom	89	A	1
3	Chan	Michael	45	D+	2
4	Wong	Susan	76	B+	2
5	Kim	Mary	82	A-	1
6	Patel	Amy	56	C	0
*	#####		0		0

Students	
	ID
	Surname
	First Names
	Total Mark
	Grade
	Lab number

SQL exercise

- ▶ Which of the following SQL commands will *only* display the first names of students whose Total mark was greater than 70?
Order the results table by total mark in descending order

Dick
Tom
Mary
Susan

- ▶ 1: SELECT [First Names] FROM Students WHERE Mark > 70
ORDER by [Total Mark];
- ▶ 2: SELECT [First Names] FROM Students WHERE [Total Mark]>70 ORDER BY [Total Mark] DESC;
- ▶ 3: SELECT [Total Mark] DESC FROM Students WHERE [Total Mark]>70;

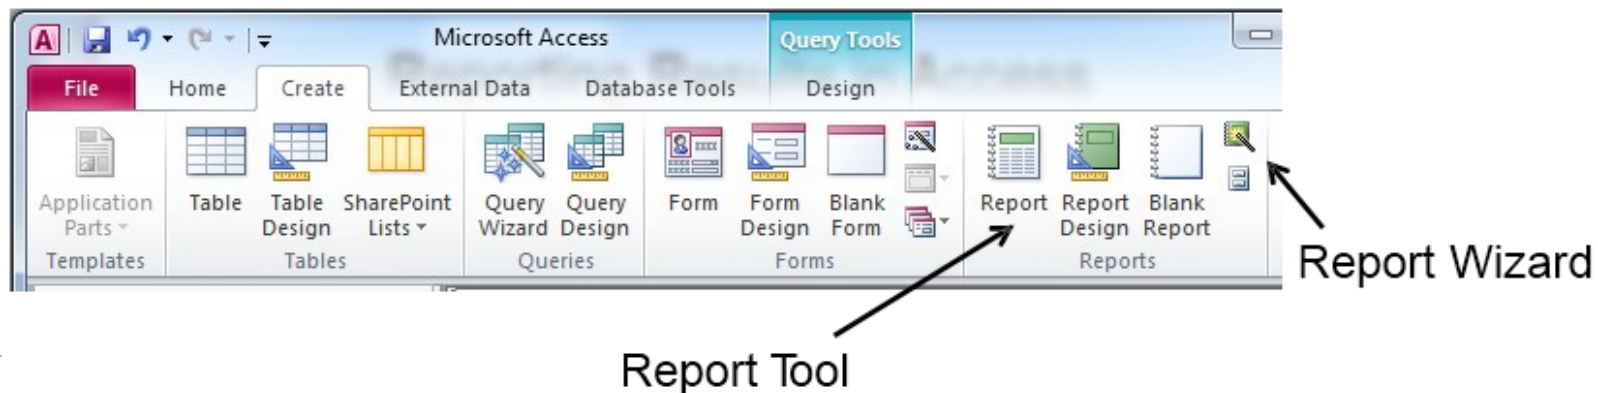

Aspects of a database

- ▶ Before we can create our database, we need to decide how to:
 1. **Organize** data in our database
 - ▶ Models, tables, relationships
 2. **Enter** data in our database
 - ▶ Datasheet view
 3. **Retrieve** data from our database
 - ▶ QBF and SQL queries
 4. **Present** the retrieved data to the user

3. Presenting data

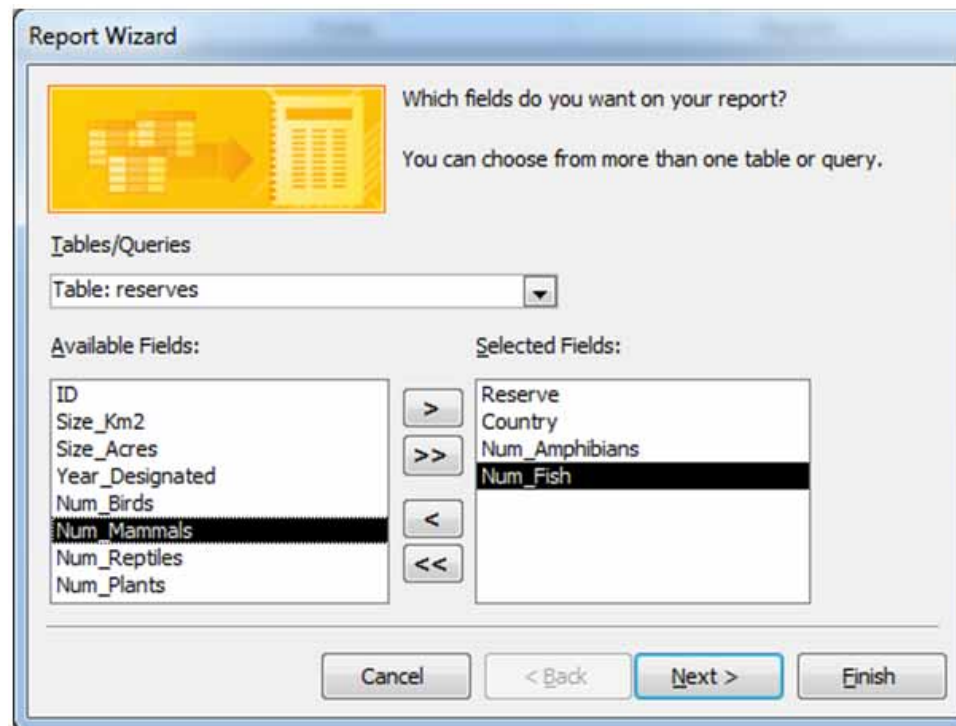

- ▶ **Reports** allow you to present the contents of a table or query in a nicely formatted table
- ▶ There are two ways of creating Reports:
 - ▶ Report Tool (show entire table, some formatting control)
 - ▶ Report Wizard (table/field selection, grouping, sorting)
 - ▶ We will look at the Report Wizard

The Report Wizard

- ▶ Select the tables and fields you want to display in your report

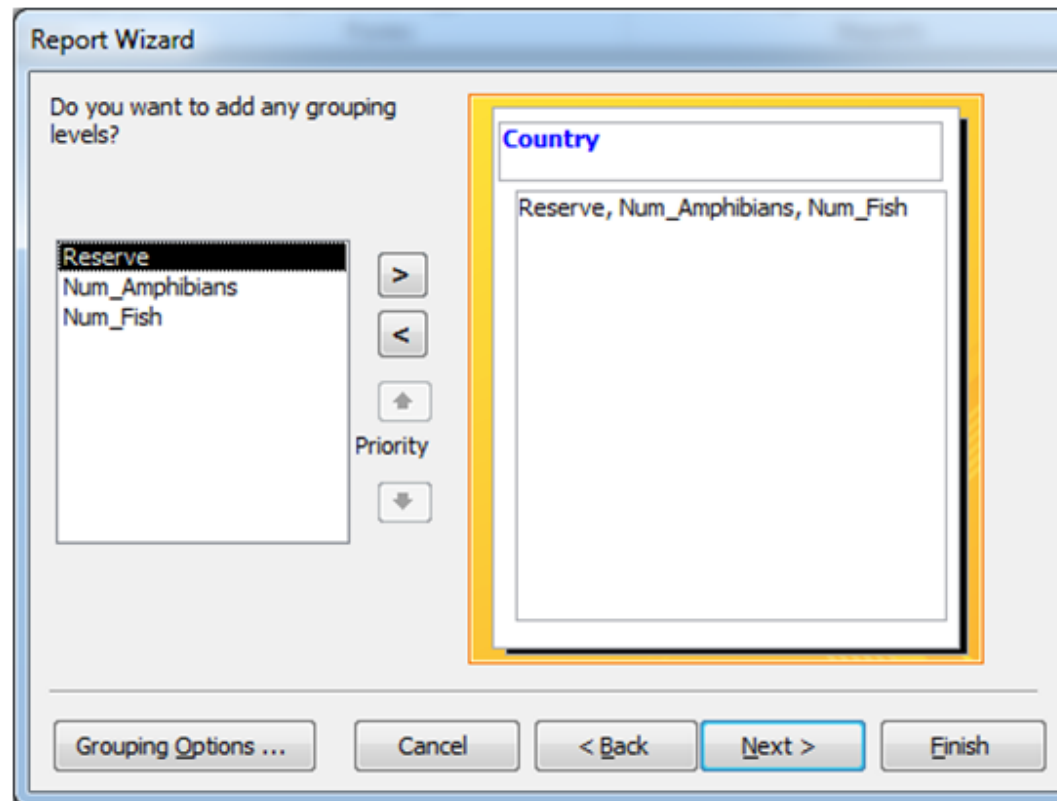

The screenshot shows the 'Report Wizard' dialog box. At the top, it asks 'Which fields do you want on your report?' and states 'You can choose from more than one table or query.' Below this, there is a 'Tables/Queries' section with a dropdown menu set to 'Table: reserves'. The 'Available Fields:' list includes ID, Size_Km2, Size_Acres, Year_Designated, Num_Birds, Num_Mammals (highlighted), Num_Reptiles, and Num_Plants. The 'Selected Fields:' list includes Reserve, Country, Num_Amphibians, and Num_Fish (highlighted). Navigation buttons at the bottom include 'Cancel', '< Back', 'Next >', and 'Finish'.

The Report Wizard

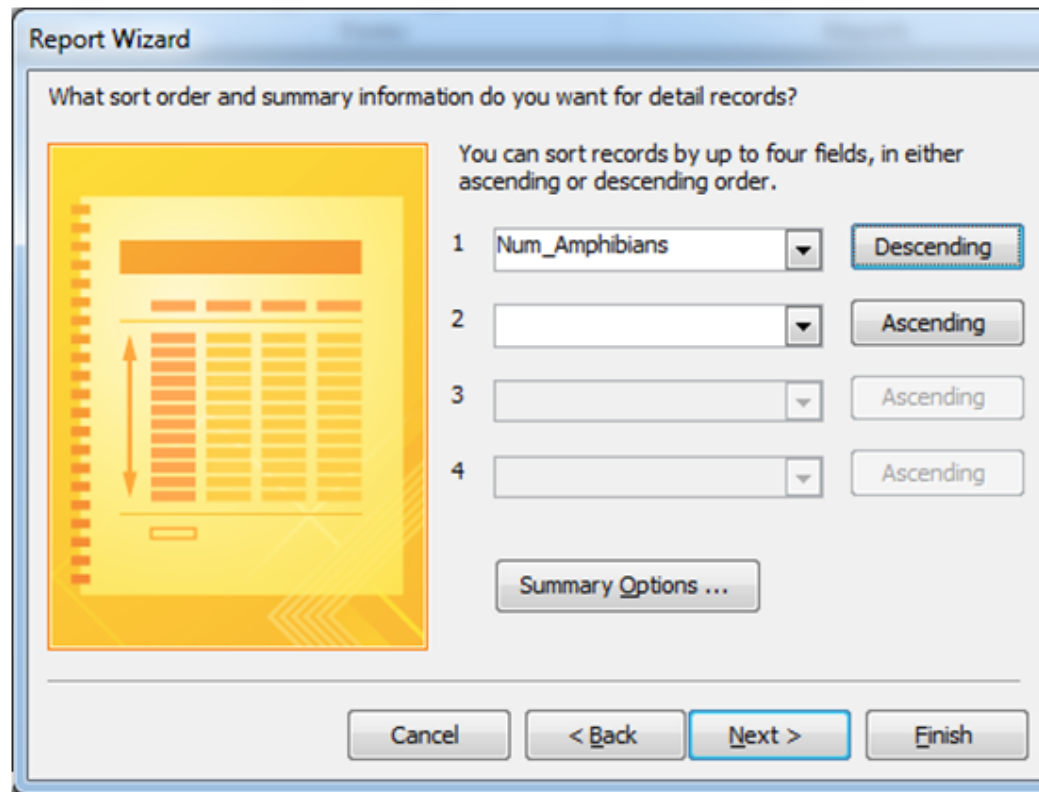

- ▶ You can group records in the report using particular fields

The Report Wizard

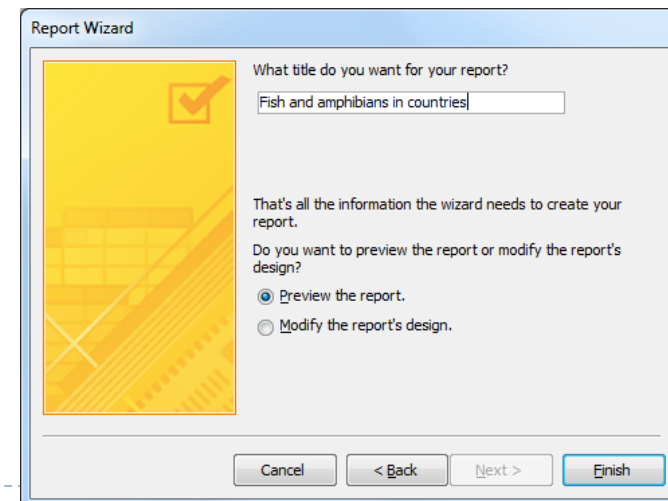

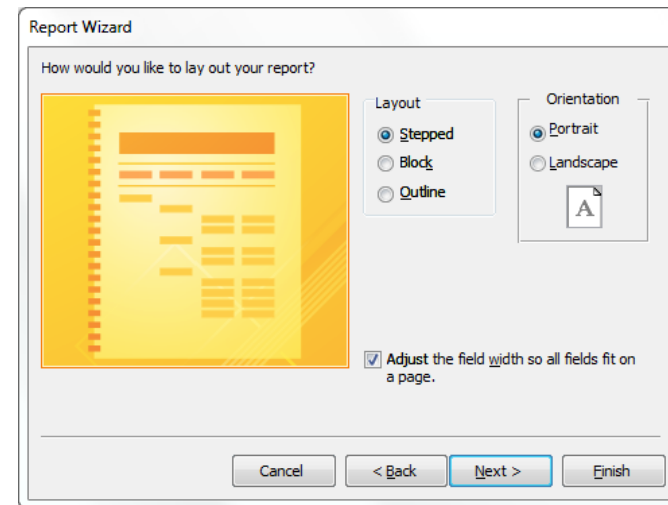

- ▶ You can sort records in the report by one or more fields

The Report Wizard

- ▶ You can set certain aspects of your report's formatting in the Wizard
- ▶ The final step involves giving the report a name and clicking on 'Finish'

The Report Wizard

- ▶ The finished report, ready for printing
- ▶ You can continue to modify the report's formatting at this point

Fish and amphibians in countries' reserves		
Country	Num_Amphibians Reserve	Num_Fish
Australia		
	27 Kakadu National Park	0
	23 Girraween National Park	3
	21 Shoalwater and Corio Bays Area Ramsar Site	0
	12 Fitzgerald River National Park	3
	11 Grampians National Park	12
	11 Purnululu National Park	20
	9 Bookmark Biosphere Reserve	6
	9 Kosciusko National Park	11
	9 Wilson's Promontory National Park	31
	8 Prince Regent River Nature Reserve	20
	7 Coorong National Park	0
	6 Flinders Chase National Park	0
	6 Lavinia Nature Reserve	8
	6 Hattah-Kulkyne NP and Murray-Kulkyne Park	16
	5 Uluru - Kata Tjuta National Par	0
	5 Yathong Nature Reserve	0

Summary

1. **Organize** data in our database
 - ▶ Models, tables, relationships
 2. **Enter** data in our database
 - ▶ Datasheet view
 3. **Retrieve** data from our database
 - ▶ QBE and SQL queries
 4. **Present** the retrieved data to the user
 - ▶ Report Wizard
-
- ▶ Post-Lecture-Quiz: PLQ_22

Practical in-class Exercise

Employees

EMPLOYEE_ID	FIRST_NAME	LAST_NAME	DEPT_CODE	HIRE_DATE	CREDIT_LIMIT	PHONE_NUMBER	MANAGER_ID
201	SUSAN	BROWN	EXE	1/06/1998	\$30.00	3484	
203	MARTHA	WOODS	SHP	2/02/2009	\$25.00	7591	201
204	ELLEN	OWENS	SAL	1/07/2008	\$15.00	6830	202
205	HENRY	PERKINS	SAL	1/03/2006	\$25.00	5286	202
206	CAROL	ROSE	ACT				
207	DAN	SMITH	SHP	1/12/2008	\$25.00	2259	203
208	FRED	CAMPBELL	SHP	1/04/2008	\$25.00	1752	203
209	PAULA	JACOBS	MKT	17/03/1999	\$15.00	3357	201
210	NANCY	HOFFMAN	SAL	16/02/2007	\$25.00	2974	203

Practical in-class Exercise

- ▶ Open the Employees table
- ▶ Try the following:
 - ▶ List the employee ID, first name, last name and credit limits of the employees with a credit limit over \$20.00. Sort them by the size of the credit limit

Query1

employee_id	first_name	last_name	credit_limit
210	NANCY	HOFFMAN	\$25.00
208	FRED	CAMPBELL	\$25.00
207	DAN	SMITH	\$25.00
205	HENRY	PERKINS	\$25.00
203	MARTHA	WOODS	\$25.00
201	SUSAN	BROWN	\$30.00

- ▶ List the employee ID, first name, last name and credit limits of the employees with the last names starts with B:

Query2

employee_id	first_name	last_name	credit_limit
201	SUSAN	BROWN	\$30.00
