

Netauth: Supporting User-Based Network Services (UBNS)

M. Radhakrishnan, J.A.Solworth
17th USENIX Security Symposium
Pages 227-242, 2008
Emlyn Revell-Nash

Summary

- “Like privilege separation, UBNS partitions applications into processes in such a way that each process' permission is minimised.”

Appreciation

Criticism

- The paper only focuses on authentication.
 - Can we believe them?
- UBNS is hard to retrofit.

Question

- Could there be a place for UBNS even though it is so hard to retrofit?
